

Project Synopsis

Learnify Course Website

Student Name: Mohd Saif Shekh

PRN: 2023017001470374

Project Type: Front-end multi-page educational website

Technologies: HTML5, CSS3, JavaScript

1. Introduction

Learnify Course Website is a multi-page educational website designed to present web design and front-end development courses in a simple and attractive way. It combines course information, admission flow, service details, contact information, and payment options in one connected interface.

The purpose of this project is to help students explore courses, understand the learning path, and move smoothly from browsing to enrollment.

2. Objectives

- Present course details in a clear and organized format.
- Provide a simple admission and payment flow.
- Give users quick access to course categories and support pages.
- Replace scattered information with a single structured website.

3. Scope

This project includes the home page, course listing with search/filter, about, services, contact, admission, and payment pages, along with responsive layout and navigation.

This project does not include database integration, user authentication backend, real payment gateway integration, or an admin dashboard.

4. Technologies Used

- HTML5
- CSS3
- JavaScript
- Google Fonts
- Ionicons

5. System Architecture

The project follows a client-side, multi-page website architecture.

Main components: **index.html** as the landing page, **courses.html** for the course catalog and search, **about.html** for the project overview, **services.html** for service highlights, **admission.html** for form-based enrollment, **payments.html** for fee and payment details, **contact.html** for support information, **style.css** for visual design, and **javascript.js** for course search and filtering.

Data flow: User opens a page -> reads content -> navigates using menu links -> searches courses or fills admission details -> moves to payment/contact pages.

6. Modules & Functionalities

- Home module: Introduces the platform, highlights featured course content, and provides login/signup actions.
- Course module: Displays multiple course cards with duration, level, and enrollment buttons.
- Admission module: Collects basic student information through a form.
- Payment module: Shows payment methods and course fee details.
- Services module: Explains the support and learning services offered.
- Contact module: Provides contact details and next-step links.
- Search module: Filters course cards based on keywords on the courses page.

7. Methodology

- Requirement understanding
- Page planning
- UI design
- HTML/CSS development
- JavaScript functionality
- Testing and refinement

8. Expected Outcome

The website gives users a smooth way to explore courses, read information, and move toward enrollment. It improves visibility of the course offerings and creates a polished learning platform for students.

9. Conclusion

Learnify Course Website is a practical front-end project that demonstrates how a course-selling or training website can be organized across multiple pages. It combines design, content presentation, and basic interactivity to create a useful educational portal.

10. References

- Project files: index.html, about.html, admission.html, courses.html, payments.html, contact.html, services.html, style.css, javascript.js
- Google Fonts
- Ionicons
